FEATURES

Duo frame.

Fluid Motion, Firm Support.

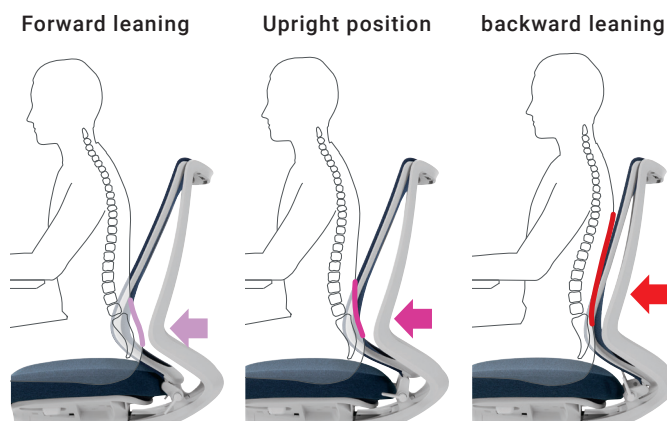

Duora2 is a functional office chair featuring a “duo frame” and a weight-sensing mechanism that automatically adjusts to your weight, providing an instant, intuitive fit. The one-lever pelvic support and independent forward-tilt seat precisely follow your body as you transition between leaning forward to focus and reclining to rest.

FEATURES

3-support functions to maintain the spine's natural S-curve.

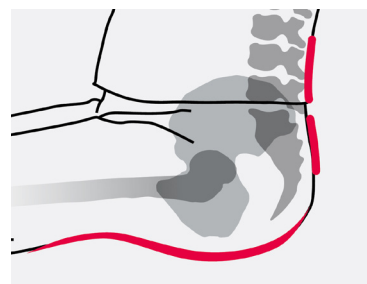

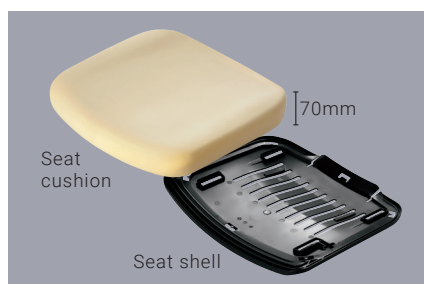

3-position pelvic support

The lower back support can be adjusted to three positions, stabilizing the pelvis to maintain proper posture. Simple level adjustment to the backward leaning / upright / forward leaning position.

Posture support seat

The pliable, contoured seat shell firmly holds the pelvis in place while allowing for even weight distribution and flexible movement.

Auto-tilt mechanism

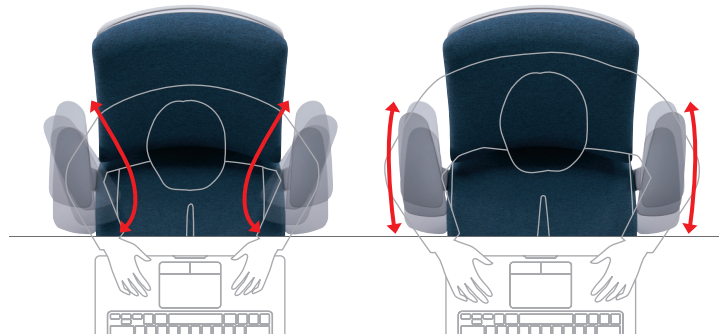

The seat surface automatically adjusts to forward / backward leaning postures in accordance to body movement. This maintains the spinal S-shape curvature even in the forward leaning posture. Further, the Auto-tilt enhances weight dispersion and relieves pressure on the back of the thighs.

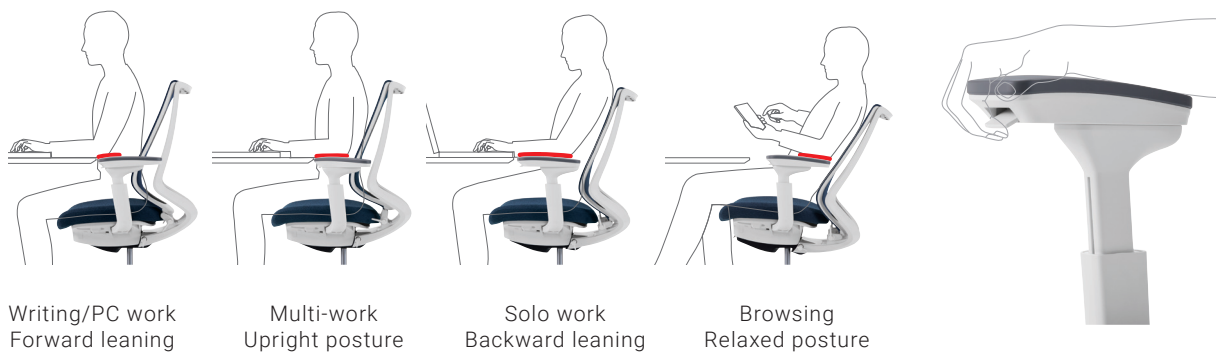

FEATURES

2-way motion armrests

2-way adjustable armrests with a wide adjustment range to suit different seating posture from forward leaning / upright / backward leaning postures. The armrests slide to accommodate different body types and ensure optimal comfort and positioning.

The lift lever is located under the armrest. Since the fingertips can reach the lever while the hand is on the armrest, it is easy to adjust both vertically and horizontally.

Sustainable design for the future

Office chairs are composed of numerous parts. That's why we are committed to environmental considerations, such as using recycled materials for each part. After purchase, the easily soiled back and seat upholstery and cushions can be replaced. Designed for a longer lifespan than its predecessor. Also, the back can be replaced with either cushion or mesh.

FEATURES

Adjustable headrest

Height and angle adjustable headrest to suit different body physique and working postures. Support the back of the head to reduce pressure strain on the back and neck.

Height range: 150mm

Angle range: 30°

Auto-fit synchro tilt

Synchro backrest with smooth unhindered tilt. Stabilizing counterforce to maintain balance, and weight operated tilt tension control.

Recline angle adjustment

The tilting angle is selectable from 4-settings.

[Upright fixed position (0°), 6°, 13°, 20°]
